

Vigilant365™

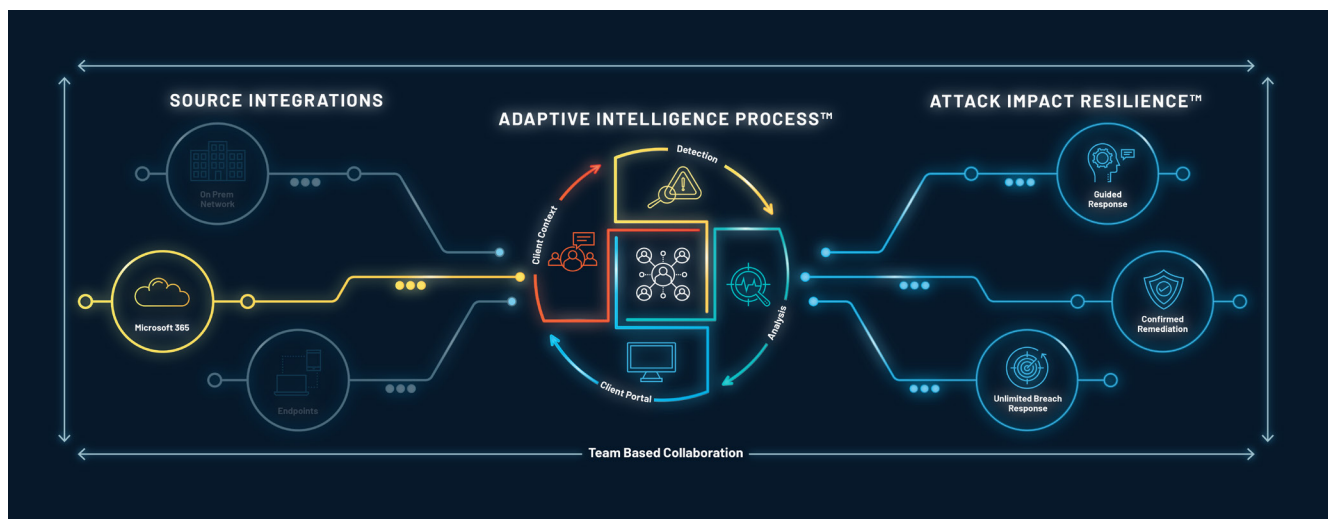

Enhanced Microsoft 365 Detection – From a Multitude of Vectors

Be alerted to potential
email compromise for less
than **\$3 a Month***

Increased Cloud Applications = Increased Attack Surface and Increased Risk

It used to be that attackers had to penetrate your perimeter in order to access your Microsoft 365 information because it physically resided on the Network. Now that the majority of end users access these applications directly from the Cloud, the attack surface for organizations has increased exponentially. This leaves companies at an increased risk for attack, since attackers can now strike this single application from a multitude of vectors.

Vigilant365™ cuts through the extraneous information provided by traditional Microsoft 365 monitoring solutions, and intelligently alerts you to potential account takeovers. Vigilant365™ helps you monitor, aggregate and analyze key information indicating potential threat activity across your Microsoft 365 environment.

Vigilant365™ provides clear information to:

Quickly Detect
Account Takeovers

Save Time and
Resources with
Reduced Alert Noise

Be Alerted to Potential
Email Compromise
for Exchange

Unify and Condense
Security Essentials

Proactively protect and
secure Microsoft 365 users

Vigilant365™ Coverage Table

Disclaimer: In order to leverage the functionality of Vigilant365™ an Azure AD premium license (P1 or higher) is required.

CLIENT IN THE TECHNOLOGY INDUSTRY

The visibility provided by Vigilant365™ helped me save my own O365 account from possible takeover by a foreign entity. I received an alert that there was a suspicious login attempt on my account from someone overseas and Vigilant provided the needed steps to ensure nothing happened.

**You can rest assured that Vigilant will never sell your data or reveal your identity. Ever.*

***Contact Vigilant today to learn how you can receive
intelligent alerts on potential email compromise for
less than \$3/month (per user).**
